

Digital Maturity View

Screen mockups, explanations, and workflow for the Capability tab.

- Capability
- IntegrationsTracker
- CapabilityTracker

What this view is

The Digital Maturity view is the live **Capability** tab. It answers whether North Star systems are deployed, adopted, and integrated — the question the Initiative Roadmap Gantt cannot answer.

- Lists: IntegrationsTracker and CapabilityTracker
- Filters: geography, site (bound to header SITE), status
- Toggle: Actuals (deploy %) vs FY26 Forecast (adopt %)
- Cards group by domain pair, then integration ID

KPI strip

- **Total** — tracker rows for the site
- **In Progress** — status InProgress
- **Not Started** — NotStarted or NotPlanned
- **% Live** — Live, Validated, Adopted, Deployed, or Active
- **% Actuals** — average deployPct

Live numbers are SharePoint. This PDF does not invent deploy or adopt %.

Domain sort puts Engineering / Manufacturing first, then Engineering, then other pairs. CapabilityTracker rows attach when reqIntIds contains the integration ID.

How a digital lead reads maturity

Use after Roadmap and Gantt, when the question is “is it used?” not “when does it land?”

Actuals

FY26 Forecast

Path

Step 1**Set SITE**

THO, LEX, or BRP for plants that already have tracker history.

**Step 2****KPI strip**

Read % Live and % Actuals before opening cards.

**Step 3****Domain cards**

Open Engineering / Manufacturing first (MES pairs).

**Step 4****Toggle Forecast**

FY26 Forecast switches bars to adopt %.

**Step 5****Jump back**

A pending pair can be discussed on Roadmap or Risks.

Rules

- Deployed ≠ adopted. Adopted means the usage threshold is met.
- Header SITE drives the list filter. The in-tab site control is display-only.
- All Sites uses all 18 SiteCodes.
- Empty copy: No tracker records match the selected filters.

Acceptance in the design blueprint: THO, LEX, and BRP match the published tracker after the same filters.

Live % from IntegrationsTracker

Enterprise integrations

Veeva / SAP / quality pair

Empty filter state: No tracker records match the selected filters for THO.

Live % from IntegrationsTracker

This tab answers deployed / adopted / integrated — the question the Gantt cannot answer. Do not invent deploy or adopt percentages in a briefing. Read them from SharePoint when the app is online.

1 **KPI pills**
Total, In Progress, Not Started, % Live, % Actuals.

2 **Actuals / Forecast**
Actuals = deployPct. FY26 Forecast = adoptPct.

3 **Domain groups**
Engineering / Manufacturing sorts first.

4 **Capability footer**
Title · platform · target quarter when a tracker row links.
